SUMMARY

Full Stack Developer and DevOps Engineer who builds production-ready web applications and owns the entire lifecycle — from writing React UIs and Node.js APIs to containerizing with Docker, orchestrating on Kubernetes, and shipping continuously through automated GCP Cloud Build CI/CD pipelines. Delivered two live applications on Google Cloud Run with zero-manual deployments, demonstrating both strong development fundamentals and real infrastructure maturity. Monitors systems with Prometheus and Grafana, designs scalable MongoDB schemas, and writes clean, maintainable code with a relentless focus on reliability, performance, and developer experience.

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), TypeScript, HTML5, CSS3, Bash
Frontend:	React.js, React Router, Axios, Context API, Responsive Design, Figma
Backend:	Node.js, Express.js, RESTful APIs, JWT Authentication, Middleware Design
Database:	MongoDB Atlas, Mongoose ODM, Firebase Firestore
Cloud & Infrastructure:	GCP (Cloud Run, Cloud Build, Cloud Scheduler), Docker, Kubernetes (K8s), Firebase
CI/CD & Automation:	Cloud Build Triggers, GitHub Actions, Automated Deployments
Monitoring & Observability:	Prometheus, Grafana
Tools:	Git, GitHub, Postman, VS Code, Vercel, Render, Adobe Photoshop

PROJECTS

Habit Tracker Application | MERN + GCP Cloud Run | [Live](#) | [GitHub](#)

- Built a full-stack habit tracking platform with React frontend, Node.js/Express REST API, MongoDB Atlas, and JWT-based authentication with protected middleware routes.
- Containerized backend with Docker, deployed on GCP Cloud Run; Cloud Build CI/CD pipeline auto-deploys on every GitHub push with zero manual steps.
- Configured Cloud Scheduler for automated reminder jobs; React frontend hosted on Firebase Hosting.

Travel Management Website | MERN + GCP Cloud Run | [Live](#) | [GitHub](#)

- Developed a full MERN stack travel platform with destination browsing, booking flows, JWT auth, and full CRUD REST API backed by MongoDB Atlas.
- Dockerized backend deployed on GCP Cloud Run with multi-stage builds; React frontend with React Router and Axios served via Firebase Hosting.

KEY HIGHLIGHTS

- Two live, production-deployed applications on GCP Cloud Run — full-stack dev and cloud infra experience in a single profile.
- End-to-end ownership: Figma design → React UI → Node.js API → MongoDB schema → Docker → Kubernetes → Cloud Run → CI/CD pipeline.
- Automated everything: Cloud Build pipelines build, push, and deploy on every git push — no manual steps, no downtime.
- Observability-ready: familiar with Prometheus metrics collection and Grafana dashboards for monitoring deployed services.
- API-first mindset: all backend features built as decoupled RESTful services before frontend integration, enabling clean client-server separation.

EDUCATION

B.Tech, Computer Science and Business Systems — Francis Xavier Engineering College 2021 – 2025

CGPA: 7.39 | Tirunelveli, Tamil Nadu

CERTIFICATIONS

Google Cloud DevOps – Learn to Create CI/CD Pipelines in GCP (Udemy)

Instructor: J Garg – Real Time Learning | 9 hours

The Complete Web Development Bootcamp (Udemy)

Instructor: Dr. Angela Yu | 61.5 hours
